TERMS CASH IN ADVANCE

Wm. S. NELSON, Editor.
FRIDAY, MARCH 20th, 1874.

FOR CONGRESS.
From the Congressional District;
HON. L. R. DAVIS,
OF LESTER.

The late elections show the gratifying exhibit of large Democratic gains.

The liberal English journals publish highly eulogistic obituary notices of the late Charles Sumner.

Governor Davis, of Minnesota, does not want to be classed among salary-grabbers, and refuses to approve a proposition to increase his salary.

The frauds committed in the late election in Philadelphia, it turns out, were the most outrageous and disgraceful ever committed in any country.

A smoking Mountain, which threatens to break forth into a volcano, and send forth its streams of lava, is creating much excitement among the people in western North Carolina.

It is stated by the New York Price Current, on the authority of the Secretary of the Treasury, that a number of prominent English manufacturers contemplate the removal of their manufacturing and capital to the United States.

The notorious Woodhull and Claflin, who have been for some time incarcerated in the Tombs, in New York, for libel, have had a trial and been released. It would be a God send if these two strong minded females could be sent in a leaky vessel on a mission to the North Pole.

Another sprig of Royalty, it is given out, is to visit this country next summer, to set the snobs crazy, and to turn the heads of our American belles. Prince Frederick, Charles, of Prussia, is to make a tour of the world and take the United States in his hand. "Oh, for the great sensation!"

The Richmond Enquirer says that hundreds of well-to-do families in England are preparing to emigrate to Virginia in the spring, thinking it better to purchase lands in the Old Dominion than to lease them in England at an annual rental of \$25 per acre. A number of English families have already bought \$600,000 worth of land in Amelia county and are highly pleased with it.

The Prince Imperial of France, arrived at his dynasty majority on the 16th, being on that day eighteen years of age. A great many prominent Frenchmen crossing over to England, repaired to Chislehurst to pay their respects to Napoleon IV and the occasion was one of much interest. Who knows but what he may ere long wield the destinies of France.

There will, of course, be a lively time in Massachusetts among the aspirants for the vacant seat of the late Chas. Sumner. Dawes, it seems to be conceded, is the coming man, while the names of Gov. Bullock, Judge Hoar, Chas. Francis Adams and Ben Butler, are prominently mentioned. Butler gives out that he is not a candidate, yet will no doubt conclude to leave himself "in the hands of his friends." It would be a good thing if party considerations could be risen above and Chas. Francis Adams could be sent to fill the seat of the distinguished dead. But this will not be done.

A Decision Against the Praying Women.

In the case of a liquor dealer named Morrow, in Warren county, Ohio, who had petitioned the Court of Common Pleas against the women crusaders praying and singing in front of his saloon, Judge Smith decided that not only would an action for damages lie, but that a court of equity would interfere to prevent any such infringement upon the rights of others. Morrow, however, obtained no relief because he had not requested the praying and singing expeditions to leave his premises, and had not alleged personal annoyance or injury to his business. A similar decision, we presume, would be made in any State where the question was raised, and if relief were invoked on account of personal annoyance and injury to business the ladies would be expelled from the sidewalks by order of the courts. This is another proof of the wisdom of our reformers who do not regard the religious administration of the law as a mere form.

Refunding the Cotton Tax.

Washington letter-writers say this question is now being urged, and will, probably be brought before Congress this session. As a matter of right and justice there can be no question about the propriety of refunding the tax; there is not a sucking lawyer in the country, but what knows the tax was in direct violation of the constitution, and was a pet measure of revenge passed by the Radicals.

The only question before Congress should be the kind of bill to be passed that will do justice to all parties. Several bills have been proposed, but a compromise is being arranged, by which the rights of all parties will be protected. We hope to see this done. Nearly seventy millions of dollars were taken from the cotton states by this tax, and it should be returned at once. The people of these states have been almost bankrupted by local misgovernment, and it is the duty of the general government to repay the money they have unjustly taken, and relieve the suffering of its citizens.—Memphis Register.

Carpet Baggers and their Dupes.

A Texas correspondent of the Tribune describes the many devices resorted to by the carpet-baggers to swindle the blacks of that section of the country. One scoundrel has done a thriving business by selling them "Free Papers," at \$10 each. Another speculator furnishes them with a stake-pin with cabalistic figures on it. With this the purchaser is told that he can pre-empt forty acres of his master's land. It is estimated that a million of these stake-pins at \$3 each have been sold in the South-Western States. The buyer is told to keep his purchase a secret, for if the white man discovers it the charm will not work, and the "forty acres" will be nowhere. A little less serious swindler is the travelling tradesman who sells the hair straightener (colored water), at \$1 per bottle. This is funny, and the story of it a little relieves the doleful monotony of the reports.

The decision of the Supreme Court in the case of Smith, Auditor, vs. Speed, Superintendent of Public Instruction, will have a very important bearing on State finances. By the decision just made, several hundred thousands of dollars are prevented from coming into the State Treasury, and left with the County Treasurers to be expended for schools. The amount thus placed aside for schools and the \$100,000 required to be kept in the Treasury by the funding bill, to pay interest on the obligations provided by that act, will most effectually stop the wheels of the State Treasury.—Montgomery Advertiser.

"So long," very aptly remarks the Courier-Journal, "as money can be made by selling whiskey by the drink just so long will whiskey be sold by the drink. And the temperance women will find out after a while that as fast as they mow down one crop of saloon-keepers another crop will spring up in its place. And hence, unless this singing in and around saloons is pushed right along day after day, and year after year, and age after age, no town or city may consider its drinking saloons permanently abolished."

The new Ocean Steamer, Pennsylvania, came near being wrecked in a gale, on her last voyage from Europe. The brave Captain Brady, the hero who saved so many lives in the ill-fated Atlantic disaster, happened to be on board, and after it was learned that the ship's Captain and several other officers had been washed overboard and lost, Brady was asked to take command, which he did, and brought the vessel safely to port. A handsome testimonial for his bravery has been voted him.

The legislature of Georgia, in a series of well-considered and sensible resolutions, has very becomingly and properly indorsed the tax-payers' movement of South Carolina, which has already met the approval of all the leading papers of the Union weekly as well as daily, without regard to party.

The Hon. B. H. Hill of Georgia, in response to numerous petitions, has consented to stand as a candidate for Congress in the Ninth District of that State.

A Madrid Telegram says that Gen Concha is to succeed Jovellar as Captain General of Cuba.

It is noticeable that Ben Butler was selected to present, in the house, the resolution of the Massachusetts legislature rescinding the battle-flag resolution of censure against Senator Sumner.

It seems now quite certain that the infamous Durell will be whitewashed.

The snow-storm on the Sierra mountains has blocked up the railroad trains on the Union Pacific road, and there is a general standstill until a thaw comes. Such occurrence as this will, in time, cause the construction of the Sierra Pacific railroad.

Pay Cash For Your Drugs!
That cry last year brought many to buy drugs from us. We wonder what it would take to bring them all up to pay for what they bought? A young gent said the other day that Hoffman & Co. had been making him presents all through the year, and he thought, as Christmas had come, that he ought to make them one. (He meant pay his account.) Reader, have you any thoughts like this?
If you have not paid your accounts to date, you ought to have them. But cotton is too low; you cannot afford to sell at present prices, and you won't.
If your debts are paid, it is nobody's business when you sell. If they are not, you are speculating on other men's money without their consent.
But as everybody does not see it thus—we have sent away our Book-keeper, and intend to sell Drugs for cash until we get money enough to hire another one.

A Capital Number.

The Southern Cultivator for March has a full and varied table of contents. In addition to editorials, interesting answers to inquiries, and original articles from correspondents, it contains "Prof. White's analysis of Different Parts of the Cotton Plant," his analysis of different Fertilizers, and copious extracts from "Dr. Pennington's Report of experiments at the Experimental Plant of University of Georgia," besides practical articles on the various topics connected with the farm and garden. Terms, \$2.00 a year. Address W. L. JONES, Athens, Ga.

The great Louisville drawing, it is stated, will positively come off on the 31st inst. A number of Athenians hold tickets in the great scheme all of which, are the right numbers to "take down the pot." Each of the boys, of course will be made to exclaim, "Why, I saw it, but—now I don't see it!"

Old J. in Charleston, who once lived here, and who most all our citizens remember, was drowned in Bear creek above East Port, Miss., a few days since. He was crossing the creek, which was very high, in a skiff or canoe, and managing to fall out, went down to rise no more. He was said to be under the influence of liquor at the time.

Sixteen women were graduated as doctors at a Philadelphia medical college, on the 13th. How nice it will be now for the men to get sick.

Messrs J. L. Tefft, Depot agent, and J. R. Payne, night Telegraph operator at this point contemplate getting up a class for the purpose of giving instruction in Telegraphing, by several parties. This will be an opportunity for those of our young men who desire to familiarize themselves with this important art. There is a demand for good operators in all parts of the country, and to fill important positions. For terms, and further information call on the above named gentlemen at the depot.

When Col Robert Tyler, severed his editorial connection with the Montgomery Advertiser, some weeks since a hope was expressed by all that his able pen would not long be idle, but would be called again to do giant service in the cause of the Democratic and Conservative party of the state. The gratifying announcement is received that he is now Editor in chief of the Montgomery Morning News, which paper is to be congratulated, while the conservatives of the state rejoice that this forcible writer and talented gentleman is once more in position to do battle in the great cause.

FORTY MEN DROPPED IN A WELL.
ASSORTED DRUG STORE, kept by Walter P. Davis, and they all persons wanting anything in his line to give him a call. Dr. Ruffin Coleman makes his office at the above store. M. 20, 1 m.

Scattered about in all parts of the excellent Selma Dollar Times, are short lines of good advice, telling farmers to plant an abundance of corn and but little cotton.

Dr. Billy McWilliams, has removed his office to his new residence, and a snug and cozy retreat it surely is, having in it all the necessary conveniences and the requisite seclusion for carrying on the Dentistry business. One would almost be willing to have a few teeth drawn, in order to recline in the luxuriant chairs to be found there.

In the senate of New Jersey a few days ago action was taken upon one hundred and eight bills in two hours.

Lightning legislation is hardly the name for this.

A good suggestion made by one of the State papers is, that each Democratic paper in the State send a copy, each week, free, to Col Robert Tyler at Montgomery, from now until the close of the campaign, that through them may be the better prepared to know the condition and wants of their section. The suggestion should, at once, be acted upon.

Since the commencement of March we have had much wet weather, the past week the floodgates have been open, and at this writing there seems no chance for the heavens to soon cease weeping. The farm owner can't turn a wheel, and all make behind hand in their work.

D. HYMAN & Co. are having additional shelves put in their store and otherwise extending their store with a view of laying in a heavy stock of Spring GOODS. D. Hyman starts East in a day or two, and says he will astonish the natives with fine goods at LOW prices.

The Memphis Doctors are talking of erecting a monument to those of their profession who died during the epidemic in that city last summer, but say nothing about the many who "gave up and died" as soon as they "Bronze John" made his appearance.

Patent Ballot Boxes.
Senator Matthew Carpenter wishes each polling place in the United States to be supplied with patent ballot boxes—costing fifteen dollars each which cannot be tampered with at elections. To this the Augusta Chronicle and Sentinel says: "The patent boxes might work all right, but who'd look after the parties who had them in charge? That's the trouble. Like the stranger who offered to act as John Randolph's stakeholder at a race-course, they might hold the boxes, but who in the h—would hold them?"

ALL AROUND THE PUBLIC SQUARE.

HERE, THERE AND ELSEWHERE.

—Rain! Rain! Rain!
—Creaks out of their banks.
—Farmers watching the clouds and wondering when it will rain.
—Song of the little seed, about now, "put me in my little bed."
—We congratulate Dr. Billy McWilliams.

—Trees pretty, in pink and white robes.
—Plant an abundance of corn and more than you think you'll need.
—Henry Herrick didn't bring the bride, home with him.
—Merchants getting ready to start North.

—Courtland has a "Bachelors Club" which meets regularly Saturday and Monday nights.
—Sam Brittle is struggling manfully with a pair of Bukside whiskers.

—Hate to die—I wanted to wear my blue redingote to Mrs. Hales' ball where the dying words of a Selma belle.

—We are glad to learn that Miss Mollie Hayes is improving and hope she may soon again be restored to health.
—Johnny Mason's two pet deer have taken up their quarters in the court yard, and seem loth to leave that green and refreshing retreat.

—Fish dat, fish goot, asked one Dutchman of another, "Hans, I can't tell, I only drank nineteen little moogs."

—At Lawrenceburg, Ind., on the 10th, little Flora Boothell skipped a rope 351 times, let to the ground, and the angels skipped away with her.

—Street cleaning and yard cleaning should now engage the attention of the citizens and municipal authorities.

—The Randolph Enterprise says that from present indications there will not be more than forty candidates for Probate Judge of that county.

—One Gail has asked the Mississippi Legislature to change his name, as he married a Miss Breeze and is afraid of squalls.

—Tina A. Brick is the name of a New Orleans poet, and it accurately describes the condition of many persons not poets.

—Dr. H. F. Crenshaw left for Marianna, Ark., on Wednesday last. He will, we learn, practice his profession there.

—Old Sol shone out about 11 o'clock on Thursday and a sight of his face was refreshing after the gloom of the past week.

—Set out useful and ornamental shade trees and shrubbery and use every means to render your home attractive.

—"Rex," writing from this place to the Union & American, Nashville, we are informed, says the ladies here have commenced their raid on the saloons. How did he find out?

—Billy Vaughan left for his new home in the West, on Thursday last. He was the bearer of very complimentary credentials, signed by many of our best citizens and given him before his departure. All wish him well.

—To say that the painting of Capt. J. M. Russell's new house was done by G. D. Minge and J. B. Hollingsworth, is only another way of putting it that the job cannot be beaten and is a splendid one in every way.

MARCH.

In the snowing and the blowing.
In the cruel sleet
Little flowers begin their growing
Far beneath our feet.
Softly taps the spring and cheerily,
"Darlings are you here?"
Till they answer, "We are nearly
Nearly ready, dear."

"Where is Winter, with his snowing?
Tell us Spring," they say;
Then he answers, "He is going,
Going on his way."
Poor old Winter does not love you,
But his time is past;
Soon my birds shall sing above you,
See you first at last!

"Git down on yo' knees"
Mark Twain, in the Gilded Age, tells how Uncle Dan'l and the child first saw a Mississippi steamboat. They were sitting in a row on a log in a warm evening telling about spooks after the manner of southwestern negroes, when Uncle Dan'l said, "Git down on yo' knees, 'Chil'n, dat's de way to comin'." A deep coughing sound troubled the stillness, yet toward a wooded area that jutted into the stream a mile distant. All in an instant a fierce eye of fire shot out from behind the cape, and sent a long brilliant pathway quivering athwart the dusky water. The coughing grew louder and louder, the glaring eye grew larger and still larger, glared wider and still wider. A huge, shape developed itself out of the gloom, and from its tall duplicate horns dense volumes of smoke, starred and spangled with sparks, poured out and went tumbling away into the further distance. Nearer and nearer the thing came, till its long sides began to glow with spots of light, which mirrored themselves in the river and attended the monster like a torchlight procession. "Chil'n," said Uncle Dan'l, it's de Almighty. Git down on yo' knees. As the noise and the lights drew near, Uncle Dan'l prayed: O lord we're been mighty wicked, an' we know dat we've zerve to go to de bad place but good Lord, dear Lord, we ain't ready yet, we ain't ready—let dese po' chil'n hab but one mo' chance. Take de ole niggah if you's got to hab somebody. Good Lord, good, dear Lord, we don't know what you's a gwyne to, we don't know what you's a gwyne to, but we know by de way you's a titlin' along, in yo' chariot o' fire dat some po' sinners a gwyne to ketch it. But good Lord, dese chil'n don't b-long heah, dey's from Obbedstown, whay dey don't know nuffin, an' you know yo' own sef dey ain't 'sponsible. Oh, Lord, spah de little chil'n don't tar de little chil'n 'way from deans, jes' let 'em off dis once, and take it out'n de ole niggah. Meah I is, Lord, heah I is! De ole niggah's ready, Lord, de ole— Here the steamer's whistle awoke the family, and Uncle Dan'l, seeing as many of the 'chil'n's hands' as his own heavy ones could hold, scoured off toward the woods. Looking back they saw the boat was rounding a point out of sight. Well, said the relieved Uncle Dan'l, dere's some folks dat say dey ain't no fectacy in prah. Dis chil'n would like to know what we been if it want to dat prah. Dat's it; dat's it.

To the Point.
An exchange says: "Compare the publisher of a newspaper, who has to go all around the country to collect his pay, to a farmer who sells his wheat on credit, and not more than a bushel to any person. If any farmer will try the experiment of distributing the proceeds of his labor over two or three counties, with an additional one or two or three distant States, for one year, we will guarantee that he will never, after that years experience, ask a publisher to supply him with a paper a year or two without the pay for it."

Please stop my—What?
We clip the following sensible hints from the Baptist Watchman: "Times are hard, money is scarce, business is dull, retrenchment is a duty—please stop my—Whisky?"

"O, no; times are not hard enough for that. But here is something else that costs me a large amount of money every year, which I wish to save. Please stop my—tobacco, cigars and snuff?"

"No, no, not these; but I must retrench somewhere; please stop my—ribbons, jewels, ornaments and trinkets?"

"Not at all; pride must be fostered, if times are ever so hard; but I believe I can see a way to effect quite a saving in another direction—please stop my—tea, coffee, and needles, and unwholesome luxuries?"

"No, no, no, not those, I must think of something else. Ah, I have it now. My paper costs \$2.00 a year; I must save that. Please stop my paper! That will carry me through the panic easily. I believe in retrenchment, and economy, especially in brains."

—Bishop Stevens has come South to see how the negroes are getting on. In one of his letters, he says: "A lamentable evil among the colored people is the facility with which they allow themselves to be led by political demagogues, especially the so called carpet-baggers."

At a recent golden wedding in Nantua, Conn., the old couple showed the young folks how "courtin'" was done fifty years ago, and those of the young folks who know how it is done at the present day couldn't see that the method had changed much.

ATHENS COTTON MARKET.

Cotton at . . . 6c @ 13 1/2c.

Tribute of Respect.
The following resolutions were unanimously adopted by the Athens Grange.

Whereas it has pleased Almighty God to remove from this Grange to pleasant fields above, our esteemed brother Daniel A. Cannon, who died at his residence in this county on the 1st day of February 1874, Be it therefore resolved.

1. That we deplore his loss and mingle with those of his bereaved family, our tears.
2. That as a faithful laborer, he placed his trust in God.
3. That as a diligent cultivator, he nurtured the hope of a better life.
4. That as a liberal harvester he dispensed charity.
5. That as an honest husbandman he was noted for his fidelity.
6. That a copy of these resolutions bearing the seal of our Grange be handed to his family by the Secretary, and the Post and News be requested to copy them.

JAMES L. COMAN.
PRESTON CAPSHAW, Secy.
A. P. GRIFFIN.

The Grange will perform the burial rites at the grave of Bro Cannon, at the Athens Grange, at 10 o'clock A. M. 3rd Sunday in May. The Grangers of the county are respectfully invited to be present on that day and participate in the ceremonies.

ALL SORTS.
Georgia has 750,000 Grangers.
The Alabama Supreme Court adjourned on the 5th inst.
The next National Grange meets at Charleston, S. C.

Some thirty miles of the Central Pacific Railroad are blocked by snow.
After a recent hail storm in Dallas county, hail stones were picked up weighing two pounds.
The bill before Congress designed to restore the franking privilege was defeated several days ago by a vote of 121 to 111.

Great efforts are on foot to secure a large Congressional appropriation for the Centennial Exhibition.
Some of the Columbus, Ohio, school boys told the ladies their visits were getting to be a nuisance.

Proceedings are to be at once begun against some of the prominent persons engaged in the Tichborne case for conspiracy.
The telegraph still brings news of Indian outbreaks in Texas.

The great drought in India was at last relieved, about a third of the crops. Famine threatens the poorer classes. At least 2,000,000 were actually suffering and the number is increasing. It is believed that it will yet reach 30,000,000! Horrible!

A bill has been introduced in the Mississippi Legislature instructing Senators and Congressmen to urge a bill to refund the cotton tax.

Johnson Taylor, who lives fourteen miles from Nashville, has not been to that city in twenty-seven years.

It is estimated that cotton samplers in New York state, yearly, 16,666 bales of cotton.

The steamship Pennsylvania encountered a hurricane on the 27th ult., and lost three officers, and four other men washed overboard.

The Mississippi was rising steadily at Memphis on the 10th, and was in fifteen inches of high water mark. The levee near Sunflower Landing is broken and the water rushing through into Sandover and Yazoo bottoms.

The legislature of Ohio costs that state about \$800 a day. Mississippi with about one-fourth the population of Ohio, pays her legislature \$1,200 a day, yet Mississippi Republicans talk glibly of economy.

Cardinal Antonelli has sent a circular letter to all the Bishops of the Roman Church to come to Rome, as the Pope wishes to see them before he dies.

Levis Irving, of St. Louis, blew his brains out because a certain young lady would not marry him, and after he was laid away, his father eulogized with the same girl.

An editor, who has indulged in a heavy life insurance, is said to be followed, whenever he goes a fishing, by several insurance agents affectionately bearing life preservers and umbrellas.

Boston Post: "Place it has been discovered that good whisky can be manufactured from sawdust, wood-sawing has become a fashionable amusement."

Prince Frederick Charles of Prussia will make the tour of the world next summer. His route is to be eastward through Russia, Siberia, Japan, thence to San Francisco, making the tour of the United States, and back to Berlin by the way of London.

Athens Produce MARKET.
CORRECTED WEEKLY BY G. MASON, & CO.

Provisions
Bacon—clear sides, . . . 13 1/2c lb.
Shoulders, . . . 12 1/2c lb.
Salt pork, 12 @ 13 1/2c lb.
New wheat flour, \$6.00 per hundred.
Old wheat flour, . . . none.
MEAL, . . . \$1.00 per bushel.
SALT \$4.00 for 45 bushel bbls, and \$4.50 for 7 bushel bbls.

POTATOES—Sweet, \$1.50 per bushel.
Irish, . . . \$1.50 @ \$2.00.
EGGS & BUTTER—Eggs 15c per doz; butter, . . . 25c lb.

Announcements.
FOR THE LEGISLATURE.
We are authorized to announce CAPT. JNO. M. TOWNSEND, as a candidate for the lower House of the State Legislature.

FOR COUNTY TREASURER.
We are authorized to announce G. W. TANNER as a candidate for County Treasurer of Limestone County, at the ensuing election.

We are authorized to announce W. CAIN, as a candidate for re-election as Treasurer of Limestone County, at the ensuing election.

We are authorized to announce JNO. H. DAVIS, as a candidate for Treasurer of Limestone County at the ensuing election.

FOR CIRCUIT CLERK.
We are authorized to announce J. A. MOORE as a candidate for Circuit Clerk at the ensuing election.

FOR SHERIFF.
We are authorized to announce ROBERT L. REDDS, as a candidate for Sheriff of Limestone County at the ensuing election.

We are authorized to announce JOHN O. MASON, as a candidate for Sheriff of Limestone county at the ensuing election.

We are authorized to announce JOHN A. TILMAN as a candidate for sheriff at the ensuing election.

We are authorized to announce S. D. GLAZE as a candidate for Sheriff at the ensuing election.

We are authorized to announce G. D. MINGE, as a candidate for Sheriff of Limestone County at the ensuing election.

Standing purely on the White man's platform.
FOR PROBATE JUDGE.
We are authorized to announce BENJON SANDERS Esq., as a candidate for Probate Judge of Limestone County, at the ensuing election.

We are authorized to announce CARL CHAS. W. RAISLER, as a Candidate for Probate Judge of Limestone County, at the ensuing election. Standing squarely on the platform of the white man's party.

We are authorized to announce Judge JOSUAH P. COMAN as a candidate for re-election as Probate Judge at the ensuing election.

FOR TAX COLLECTOR.
We are authorized to announce Wm. R. BAILEY as a candidate for Tax Collector of Limestone County at the ensuing election.

We are authorized to announce JOHN M. RUSSELL as a candidate for Tax Collector at the ensuing election.

We are authorized to announce J. W. TODD as a candidate for Tax Collector at the ensuing election.

We are authorized to announce Capt. SMITH C. TWITTY, as a candidate for Tax Collector at the ensuing election.

FOR TAX ASSESSOR.
We are authorized to announce CHAS. A. ANNETT as a candidate for Tax Assessor at the ensuing election, subject to Democratic Convention.

We are authorized to announce R. B. PATTERSON, as a candidate for Tax Assessor at the ensuing election.

We are authorized to announce BROOKS S. MCKINNEY as a candidate for Tax Assessor at the ensuing election.

FOR TOWN MARSHAL.
We are authorized to announce HENRY J. CRENSHAW as a candidate for Town Marshal, at the ensuing election.

NEW DRUG STORE!
J. R. Hoffman & Co., on the North side of the Public Square, we have opened up a well selected stock, comprising everything usually kept in a First Class DRUG STORE.

We will keep on hand the best brands of chewing and smoking Tobacco, Cigars, &c., &c.

We invite the attention of ladies to our stock of FANCY and TOILET ARTICLES, Brushes, Perfumery &c., &c.

Special attention paid to the compounding of **PATENT** **SCRIPCTIONS**, and orders answered with care and dispatch.

We are selling for cash, which will enable us to sell for SMALL PROFITS and give satisfaction.

To our friends we return thanks for aid they have heretofore given us, and will endeavor in future to merit a continuance of the same.

Dr. N. D. Richardson has an office in our Store, where he can be found at all times, unless Professionally absent.

Fall & Winter.
P. F. CRENSHAW, SAMUEL TANNER.
Crenshaw & Tanner,
—DEALERS IN—
STAPLE AND FANCY
DRY GOODS,
Boots, Shoes, Hats and Caps, Clothing, Hardware, Queensware.

Also a large variety of
Gentlemen's Furnishing Goods.
EAST SIDE PUBLIC SQUARE.
ATHENS, ALABAMA.
We are now receiving and opening up and well selected Stock of Spring and Summer Goods, which we are off at greatly reduced rates.

E. J. Russell & Co.
DEALERS IN
DRY GOODS.
ARE NOW IN RECEIPT OF A FULL STOCK OF
FALL AND WINTER
STAPLE AND FANCY
Dress Goods
Boots and Shoes, Clothing, Hardware, Queensware
and a Superb Stock of
ALL KINDS OF GOODS
Usually kept in this market.

Planters and others would do well to call on us before purchasing.
All kind of barter taken in trade.
ALL KINDS OF WORK
work done at the office of me "100"

SOMEWHERE ELSE.
How can I come to pray for thee? Somewhere
In thy great universe thou art today.
Can I not reach thee? Can I not find thee?
Can I not hear thee when thou art away?
What matters it to him who holds within
The power of the great God within him?
That thou art somewhere? Can I not find thee?
Can I not hear thee when thou art away?
Somewhere within his heart thou art a place!
Somewhere there thou art, and need of him
Somewhere there thou art, and need of him
And somewhere there, there may be valleys dim
That thou must pass to reach the hills sublime.
Then all the more, because thou canst not hear
From human words, thou art a place!
O'er him, brave heart, God bless thee, wherever
In his great universe thou art today!

THE POLARIS.

Scientific Results of Dr. Hall's Last Expedition.

The results of the expedition may be summed up briefly as follows:

1. The Polaris reached 82 deg. N., a higher latitude than has been attained by any other ship.

2. The navigability of Kennard channel has been proved beyond a doubt.

3. A record of seven hundred miles of coast line have been discovered and surveyed.

4. The insularity of Greenland has been proved.

5. Numerous observations have been made relating to astronomy, magnetism, forces of gravity, ocean physics, meteorology, zoology, ethnology, botany, and geology, the records of which were kept in accordance with the instructions supplied by the national academy, and some of the results of which we propose briefly to enumerate.

6. The expedition in determining a reliable meridian at Thule, Greenland harbor. Soon after entering winter quarters an observation was made on the sun on shore, 84 feet above mean sea level, and the transit instrument stationed there. The longitude of this station was determined by the observation of 800 stars, and a number of moon culminations; a great number of star transits; a number of star occultations; and a great number of altitudes of stars. All of these observations were made, but a number of the results have been preserved which are sufficient to establish the position of this station. Besides the above mentioned observations, 20 sets of pendulum experiments were made, which are saved, but the observations of time belonging to them are lost.

The magnetic observations obtained were more complete than any other ever before made in the Arctic regions. The instruments supplied were: One universal declination compass, one with Lloyd's needles; one theodolite, and several prismatic compasses. The observations on variation of declination were registered on a special form, and were continued for five months. Readings were taken hourly. Besides that, three-day means were observed every month, according to the changing regulations, one of these three-day observations corresponding with the days accepted at all the magnetostations. Further, a number of observations were taken either with the theodolite or with the compass. Whenever possible, the dip was observed, and several sets of observations on relative and absolute intensity and of the moment of inertia were obtained.

Unfortunately there was not much opportunity for taking soundings. About twelve were obtained along the coast of Greenland, and one in the bay of the hundred-fathom line follows the east at a distance of about fifteen miles in Smith Sound. One of these soundings (90 fathoms) was particularly interesting, containing an organism of lower type than the *Bathyporus* discovered by the English dredging expedition. It was named *Proteolites* and *Proteolites*.

A number of deep-sea temperatures were taken with corresponding observations on the density of the water. Following the coast of Greenland the limits of the Gulf Stream were ascertained. Specimens of water from different depths were preserved in bottles, but, unfortunately, lost.

After having secured the waters meteorological observations, which up to this time had been made three-hundred, were made every hour, Washington time. The regular observations in the air, atmospheric pressure, psychrometric observations, directions and force of wind, appearance of the sky, state of weather, and barometric readings, radiation. Besides, all extraordinary meteorological phenomena were carefully noted.

Special attention was devoted to the aurora borealis, which occurred frequently, but rarely showed brilliant colors, never bright enough to produce spectrum. Whenever necessary, one observer was stationed at the magnetometer and the other outdoors, the former observing the motions of the magnet, while the other was watching the changes in the phenomenon, taking sketches. Although an electro-scope and electrometer were set up, as the electrical condition of the atmosphere frequently varied, the electro-scope could not be used, as it was not detected. The amount of precipitation was measured as carefully as the violent gusts would permit, by means of a rain gauge supplied with a funnel. In February, as soon as the sun reappeared, observations on solar radiation were commenced and continued throughout the entire summer.

The collections of natural history are nearly entirely lost. With the exception of two small cases containing animals, plants, nothing could be rescued. The character of the fauna is North American, as indicated by the occurrence of the lemming and the musk-ox. Nine species of mammals were collected, which are seals. The birds are represented by twenty-one species. The number of species of insects is about fifteen. One beetle, one fly, one spider, six diptera, one coleoptera, and several ichneumonids, parasites in caterpillars. Further, two species of spiders and several mites were found. The animals of lower type are not yet ready for examination.

The flora is richer than could be expected, as not less than seventeen phanerogams were collected, besides three mosses, three lichens, and five fresh water algae.

Although the formation of the upper Silurian limestone seems to continue the whole way east from the Humboldt Glacier, is very uniform, some highly interesting and important observations have been made. It was found that the land is rising, as indicated, for instance, by the occurrence of marine animals in fresh water lakes more than thirty feet above the sea-level and far out of reach of the spring tides. Wherever the land was favorable the land is covered by drift, sometimes containing very characteristic lithological specimens, the identification of which was made at the Smithsonian Institution. A very easily accessible place, for instance, garnets of typical large size were found in latitude 81 and 80 degrees, having marked mineralogical characteristics by which the identity with some garnets from Fiorenza was established. Drawing a conclusion from these observations it became evident that the main line of the drift, indicating the direction of its motion, runs from south to north.

WOMEN LAWYERS.—Miss Phoebe Cozzen is a pretty, good lawyer. Anybody may know the first to be true by looking at her, and those who are least with an admiration for her. Miss Phoebe lectured in New York the

other night, and revealed to the astonished audience the fact that there were no less than five female lawyers mentioned in the Book of Numbers. Miriam, Deborah, and Huldah were lawyers, and the Queen of Sheba and Judith might be claimed as bright members of the profession. Miss Cozzen described the wall of dignity that had heretofore surrounded the legal profession, and the stern rebuffs given by the legal gate-keepers to the women who had ventured to take a peep behind the scenes. After the array of ancient precedents which she brought forward, she presented the fact that the fraternity ought to open the gates freely and receive the candidate, not *et cetera*, but with open arms. *Virtus vincit invictum.*

Have a Garden.

Why do not farmers in general pay more attention to the garden? Some of us know to appreciate the luxury of a good garden, but the most do not. They think they have no time to attend to it. The wheat and rye fields must be mowed, and the corn must be cut. Let the women attend to the cabbage patch. Now this is wrong. Why should a farmer deprive himself of vegetable luxuries selected by city people who live in the vicinity of cities indulging in it? It is not to the country we would go for our appetites were craving early vegetables. Of such a kind, the records of which were kept in accordance with the instructions supplied by the national academy, and some of the results of which we propose briefly to enumerate.

2. The navigability of Kennard channel has been proved beyond a doubt.

3. A record of seven hundred miles of coast line have been discovered and surveyed.

4. The insularity of Greenland has been proved.

5. Numerous observations have been made relating to astronomy, magnetism, forces of gravity, ocean physics, meteorology, zoology, ethnology, botany, and geology, the records of which were kept in accordance with the instructions supplied by the national academy, and some of the results of which we propose briefly to enumerate.

6. The expedition in determining a reliable meridian at Thule, Greenland harbor. Soon after entering winter quarters an observation was made on the sun on shore, 84 feet above mean sea level, and the transit instrument stationed there. The longitude of this station was determined by the observation of 800 stars, and a number of moon culminations; a great number of star transits; a number of star occultations; and a great number of altitudes of stars. All of these observations were made, but a number of the results have been preserved which are sufficient to establish the position of this station. Besides the above mentioned observations, 20 sets of pendulum experiments were made, which are saved, but the observations of time belonging to them are lost.

The magnetic observations obtained were more complete than any other ever before made in the Arctic regions. The instruments supplied were: One universal declination compass, one with Lloyd's needles; one theodolite, and several prismatic compasses. The observations on variation of declination were registered on a special form, and were continued for five months. Readings were taken hourly. Besides that, three-day means were observed every month, according to the changing regulations, one of these three-day observations corresponding with the days accepted at all the magnetostations. Further, a number of observations were taken either with the theodolite or with the compass. Whenever possible, the dip was observed, and several sets of observations on relative and absolute intensity and of the moment of inertia were obtained.

Unfortunately there was not much opportunity for taking soundings. About twelve were obtained along the coast of Greenland, and one in the bay of the hundred-fathom line follows the east at a distance of about fifteen miles in Smith Sound. One of these soundings (90 fathoms) was particularly interesting, containing an organism of lower type than the *Bathyporus* discovered by the English dredging expedition. It was named *Proteolites* and *Proteolites*.

WOMEN LAWYERS.—Miss Phoebe Cozzen is a pretty, good lawyer. Anybody may know the first to be true by looking at her, and those who are least with an admiration for her. Miss Phoebe lectured in New York the

Civilization a Failure.

There is no concealing the fact that we humans are not only prone to "hear the lie we have," but are inclined to turn up our noses at the words of our ancestors. It is the old story of the fox that lost his tail, one of the very few fables that have a grain of sense in them. The Queen of Sheba and Judith might be claimed as bright members of the profession. Miss Cozzen described the wall of dignity that had heretofore surrounded the legal profession, and the stern rebuffs given by the legal gate-keepers to the women who had ventured to take a peep behind the scenes. After the array of ancient precedents which she brought forward, she presented the fact that the fraternity ought to open the gates freely and receive the candidate, not *et cetera*, but with open arms. *Virtus vincit invictum.*

Have a Garden.

Why do not farmers in general pay more attention to the garden? Some of us know to appreciate the luxury of a good garden, but the most do not. They think they have no time to attend to it. The wheat and rye fields must be mowed, and the corn must be cut. Let the women attend to the cabbage patch. Now this is wrong. Why should a farmer deprive himself of vegetable luxuries selected by city people who live in the vicinity of cities indulging in it? It is not to the country we would go for our appetites were craving early vegetables. Of such a kind, the records of which were kept in accordance with the instructions supplied by the national academy, and some of the results of which we propose briefly to enumerate.

2. The navigability of Kennard channel has been proved beyond a doubt.

3. A record of seven hundred miles of coast line have been discovered and surveyed.

4. The insularity of Greenland has been proved.

5. Numerous observations have been made relating to astronomy, magnetism, forces of gravity, ocean physics, meteorology, zoology, ethnology, botany, and geology, the records of which were kept in accordance with the instructions supplied by the national academy, and some of the results of which we propose briefly to enumerate.

6. The expedition in determining a reliable meridian at Thule, Greenland harbor. Soon after entering winter quarters an observation was made on the sun on shore, 84 feet above mean sea level, and the transit instrument stationed there. The longitude of this station was determined by the observation of 800 stars, and a number of moon culminations; a great number of star transits; a number of star occultations; and a great number of altitudes of stars. All of these observations were made, but a number of the results have been preserved which are sufficient to establish the position of this station. Besides the above mentioned observations, 20 sets of pendulum experiments were made, which are saved, but the observations of time belonging to them are lost.

The magnetic observations obtained were more complete than any other ever before made in the Arctic regions. The instruments supplied were: One universal declination compass, one with Lloyd's needles; one theodolite, and several prismatic compasses. The observations on variation of declination were registered on a special form, and were continued for five months. Readings were taken hourly. Besides that, three-day means were observed every month, according to the changing regulations, one of these three-day observations corresponding with the days accepted at all the magnetostations. Further, a number of observations were taken either with the theodolite or with the compass. Whenever possible, the dip was observed, and several sets of observations on relative and absolute intensity and of the moment of inertia were obtained.

Unfortunately there was not much opportunity for taking soundings. About twelve were obtained along the coast of Greenland, and one in the bay of the hundred-fathom line follows the east at a distance of about fifteen miles in Smith Sound. One of these soundings (90 fathoms) was particularly interesting, containing an organism of lower type than the *Bathyporus* discovered by the English dredging expedition. It was named *Proteolites* and *Proteolites*.

A number of deep-sea temperatures were taken with corresponding observations on the density of the water. Following the coast of Greenland the limits of the Gulf Stream were ascertained. Specimens of water from different depths were preserved in bottles, but, unfortunately, lost.

After having secured the waters meteorological observations, which up to this time had been made three-hundred, were made every hour, Washington time. The regular observations in the air, atmospheric pressure, psychrometric observations, directions and force of wind, appearance of the sky, state of weather, and barometric readings, radiation. Besides, all extraordinary meteorological phenomena were carefully noted.

Special attention was devoted to the aurora borealis, which occurred frequently, but rarely showed brilliant colors, never bright enough to produce spectrum. Whenever necessary, one observer was stationed at the magnetometer and the other outdoors, the former observing the motions of the magnet, while the other was watching the changes in the phenomenon, taking sketches. Although an electro-scope and electrometer were set up, as the electrical condition of the atmosphere frequently varied, the electro-scope could not be used, as it was not detected. The amount of precipitation was measured as carefully as the violent gusts would permit, by means of a rain gauge supplied with a funnel. In February, as soon as the sun reappeared, observations on solar radiation were commenced and continued throughout the entire summer.

The collections of natural history are nearly entirely lost. With the exception of two small cases containing animals, plants, nothing could be rescued. The character of the fauna is North American, as indicated by the occurrence of the lemming and the musk-ox. Nine species of mammals were collected, which are seals. The birds are represented by twenty-one species. The number of species of insects is about fifteen. One beetle, one fly, one spider, six diptera, one coleoptera, and several ichneumonids, parasites in caterpillars. Further, two species of spiders and several mites were found. The animals of lower type are not yet ready for examination.

The flora is richer than could be expected, as not less than seventeen phanerogams were collected, besides three mosses, three lichens, and five fresh water algae.

Although the formation of the upper Silurian limestone seems to continue the whole way east from the Humboldt Glacier, is very uniform, some highly interesting and important observations have been made. It was found that the land is rising, as indicated, for instance, by the occurrence of marine animals in fresh water lakes more than thirty feet above the sea-level and far out of reach of the spring tides. Wherever the land was favorable the land is covered by drift, sometimes containing very characteristic lithological specimens, the identification of which was made at the Smithsonian Institution. A very easily accessible place, for instance, garnets of typical large size were found in latitude 81 and 80 degrees, having marked mineralogical characteristics by which the identity with some garnets from Fiorenza was established. Drawing a conclusion from these observations it became evident that the main line of the drift, indicating the direction of its motion, runs from south to north.

IMPORTED FASHIONS.

Fashions for Spring and Summer.

WISHART'S

THE GREAT REMEDY FOR THROAT AND LUNG DISEASES!!

It is the vital principle of the Pine Tree, obtained by a peculiar process in the distillation of the tar, by which the medicinal properties are retained.

It is the most powerful and effective remedy for all diseases of the throat and lungs, and is especially adapted for the treatment of the following diseases: Croup, Whooping Cough, Sore Throat, Bronchitis, Asthma, and all other diseases of the respiratory system.

It is a powerful and effective remedy for all diseases of the throat and lungs, and is especially adapted for the treatment of the following diseases: Croup, Whooping Cough, Sore Throat, Bronchitis, Asthma, and all other diseases of the respiratory system.

It is a powerful and effective remedy for all diseases of the throat and lungs, and is especially adapted for the treatment of the following diseases: Croup, Whooping Cough, Sore Throat, Bronchitis, Asthma, and all other diseases of the respiratory system.

It is a powerful and effective remedy for all diseases of the throat and lungs, and is especially adapted for the treatment of the following diseases: Croup, Whooping Cough, Sore Throat, Bronchitis, Asthma, and all other diseases of the respiratory system.
